Necessary components: One Rohu/Taki Fish (any other fish if those are not available), Scale, Measurement tape (suitable for measuring in centimeter). If necessary, measurement can be taken with yarn and then putting it on the scale. All measurements of length and width will be in units of centimeters.</p> <p>2. For the assignment, two tables should be made on an A4 or similar size paper (see the next page).</p> <p>3. When measuring the body size of the fish, the maximum length should be taken from the mouth to the end of the tail. For the maximum width, the part of the body that is widest from the chest to the surface should be measured. This measure should be taken except fins.</p> <p>4. In the case of other parts also, the measurement should be written in the table as per the instructions. In the case of lateral lines and several distances, it is enough to mention only the length. In the case of fins, the maximum length and the maximum width should be specified.</p> <p>5. Two scales- one from the surface and another from the thoracic region should be taken and dried. Then keeping them in the specified box of Table-1 (1-4 and 1-5), outlines have to be drawn with a pen.</p>	a. To measure total 9 in Table- 1 (external structure) (1-1 and 1-2).
